

Conditions for participation:

Research should be authentic and modern and should not have been previously shared and disseminated.

• The intervention shall be prepared in accordance with the terms of publication of the articles (attached to the summary and keywords in Arabic and English).

• 14 size and 12 margins for papers in Arabic should be approved. The adoption of Time New Roman Line No. 12 and 10 margins for papers in the foreign language, with margins at the end of the paper. The paper should not exceed 15 pages.

• Joint papers are not accepted

• Accepting an abstract does not mean accepting a paper.

• Participation can only be accepted after the full paper is sent.

Kindly Send Papers to:

enveco23@univ-jijel.dz

Key Deadlines:

Last date for Abstract submission: 10/12/2023

Notification Of Acceptance: 14/12/2023

Final Full Paper Submission: 15/01/2024

Scientific Bodies of the Seminar:

Honorary Chairman of the Seminar:

Pr. Nourredine BENALI-CHERIF

Director of Mohammed Seddik Benyahia University

General Supervisor of the Seminar:

Dr. Nabil BOUIBIA

Dean of the Faculty of Law and Political sciences

General Coordinator of the Seminar:

Pr Farida HAMOUM

Chair of the Seminar:

Dr. Malika DJERMOULI

Chairman Scientific Committee of the Seminar:

Dr. Riad BOUZERB

Chairperson of the Organizational Committee:

Dr. Khadija BOURIB

Members of the scientific committee:

Farida HAMOUM Professor/Jijel University	Nabil BOUIBIA Lecturer A /Jijel University
Nabil KRIBECH Professor/ Jijel University	Malika DJERMOULI Lecturer A /Jijel University
Amina RABAHI Professor/Algiers3 University	Radia HAZOUE Lecturer A/ Jijel University
Djamel MENACEUR Professor/Guelma University	Rachid ATAMNA Lecturer A/ Jijel University
Saifi MECHAOUAR Professor /Adrar Unniversity	Imam BENAMMAR Lecturer A /Jijel University
Amine BELAIFA Professor/Bouira University	Sofiane RIMOUCHE Lecturer A/ Jijel University
Mousslim BABA ARBI Lecturer A/Ourguela University	Bilal LAISSANI Professor / Jijel University
Salim GUESSOUM Lecturer A/ Guelma University	Mouloud SOULAH Lecturer A /Jijel University
Mounira BOUDERDABANE Lecturer A/Constantine 3 University	Abderrafik KECHOUT Professor /Jijel University
Chahrazed ADEMAM Professor /Jijel University	Ahmed ADABIR Lecturer A/ Tamanghast University
Hanane MEZEHOUD Lecturer A /Jijel University	Saida KEHAL Lecturer A/ Jijel university
Zahia BECHATTA Lecturer A/ Jijel university	Samira HASSAIM Lecturer A /Jijel University
Rima KERMI Lecturer A /Jijel university	

Organising Committee :

Organizes a national Seminar on:
Environmental Economy: Between
Sustainable Development Challenges and
Market Policies

22 february, 2024

Participation form:

First and Family name :
 Field :
 Job :
 Title/ Position:
 Institution :
 Phone number :
 E-mail:
 Paper Track :
 Title of the Paper :
 Summary of the paper :

The Seminar tracks:

Track 1: Environmental economy in light of the current climate changes: Concept and Debates
 Track 2: Environmental economic policies: the challenge of the sustainable development
 Track 3: Environmental economy vis-a-vis the market economy: the limits of sustainability
 Track 4: Beyond the Market: The Need for a Sustainable Growth
 Track 5: Practical Experience in the environmental economy for a sustainable development: lessons learned .

The Seminar Objectives:

This forum aims to achieve a set of scientific and practical objectives:

- 1- Draw attention to the importance of today's environmental economy
- 2- Raising awareness of the risks and impact of climate change on the achievement of sustainable development goals.
- 3- Carrying about the environmental economy as a means to cope with climate change and achieve sustainable development
- 4- Examine the relationship between market economy and environmental degradation.
- 5- Discussion of the conflict between market policies and sustainable development.

The Seminar Theme Question :

Theme of the Seminar:

From a sustainable development perspective, markets and economies are social structures that must respond to both environmental and generational priorities, which seems uncertain under the control of the liberal market economy, and increasing demand for natural resources has contributed to environmental degradation. On the basis of the foregoing, the theme of this forum addresses the following problems:

How does the environmental economy contribute to sustainable development requirements and mitigate the adverse effects of activity?

Environmental economy is the best way to reduce the damage of climate change and environmental preservation for development, so that through which people and the environment can have the important place in the equation of sustainable development. The environmental economy designed to study the quality, data of the environment, its changes and to use environmental policies for an efficient distribution of resources, thereby protects the environment, alleviates the effects of climate change and works to achieve the rights of individuals and all generations in development in a sustainable way.

Today's economic patterns are based on the idea of growth as the only way to ensure the progress of societies, but not only does the idea of growth produce progress, but, based on a lot of empirical research, it is the main factor of environmental degradation. Given the growing importance of market practices and policies as well as sustainability concerns, the relationship between both deserves a comprehensive attention accordingly, it became commonplace to argue that economic activities threaten sustainability; The degradation of natural resources and the worsening of the problem of environmental degradation are also a threat to the economy's growth-based model, due to the fact that the costs are expected to become larger than the financial outputs bred by development.

Economic growth alone cannot fully meet people's needs and desires. Some of the consequences of economic activity are negative for different aspects of life, such as health risks from emissions, the problem of the ozone layer, declining biodiversity and new forms of inequality associated with changes in techniques and production patterns. As a result, a comprehensive, equitable and balanced approach is needed to promote sustainability, eradicate poverty and promote the well-being.

In this context, the environmental economy helps mitigate the negative effects of the economic activity. Besides, an consideration of the interests of future generations is a sufficient reason to look beyond economic growth as an indicator of well-being. However, there will be other reasons associated with market policies and the long-term sustainability of economic growth itself, which requires the preservation of the ecosystem's main services, a healthy environment and cohesive societies. Balancing these elements therefore requires stronger cooperation among States.

Based on the foregoing, this seminar provides an opportunity for a comprehensive exchange of ideas and discussion on the theoretical theses and experimental contributions.
